Keyfile Filename

[select](#) [clear](#)

Password (for decrypting Keyfile)

[input](#) [clear](#)

Filename 1

[select](#) [clear](#)

Filename 2

[\[Back\]](#)

4:15

Password Maker

2 File Password (with Keyfile)

Filename 1

[select](#) [clear](#)

Filename 2

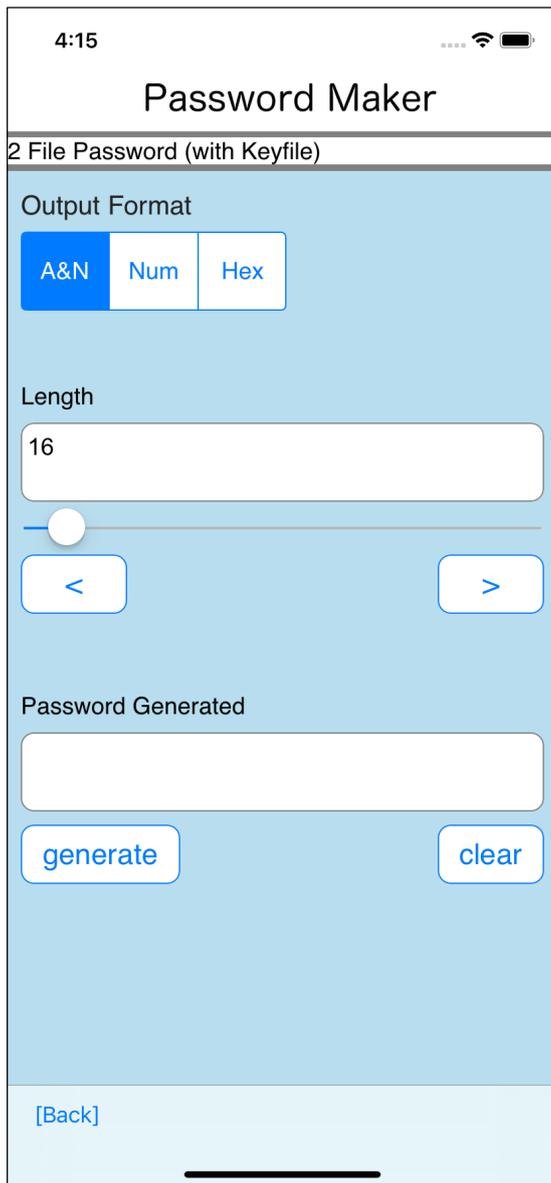

[select](#) [clear](#)

Output Format

[A&N](#) [Num](#) [Hex](#)

Length

[\[Back\]](#)

The user interface looks like this.

Key file name

Key file decryption password

Name of first file to generate password from

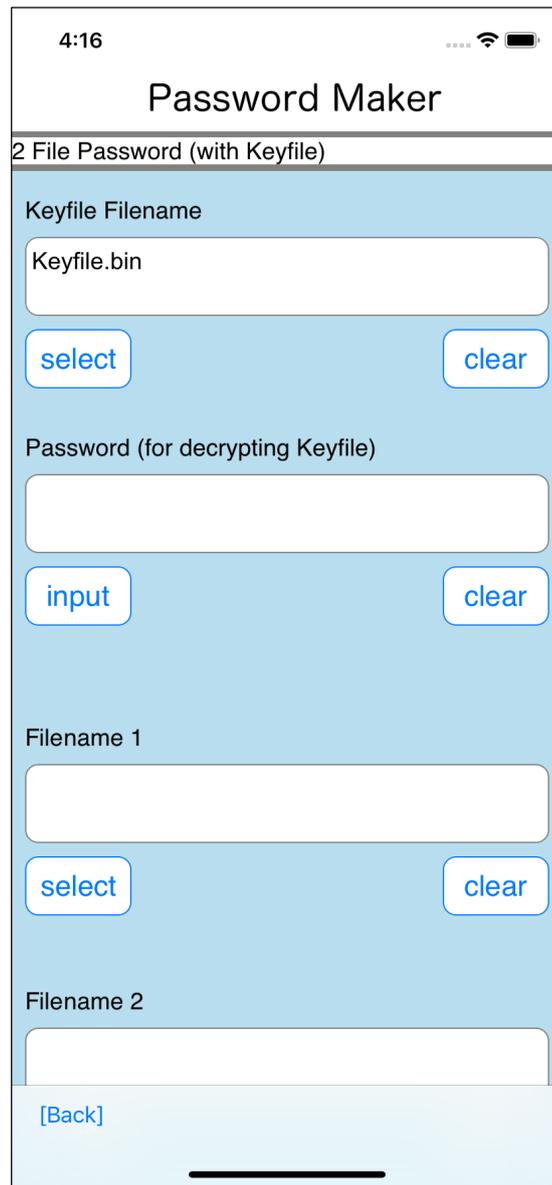

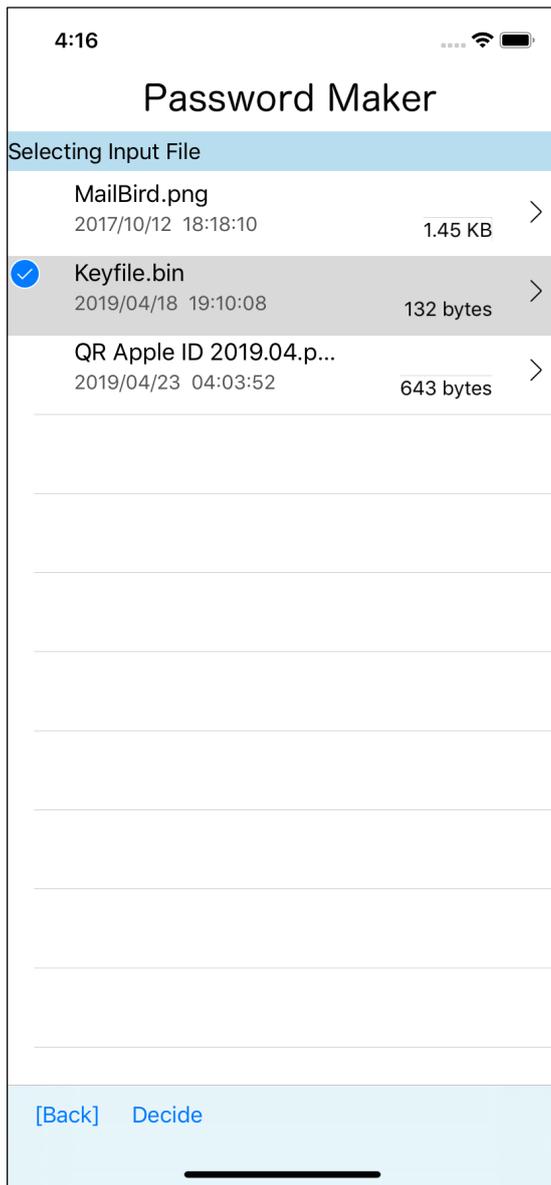

Name of the second file from which to generate the password

Output format

Password length

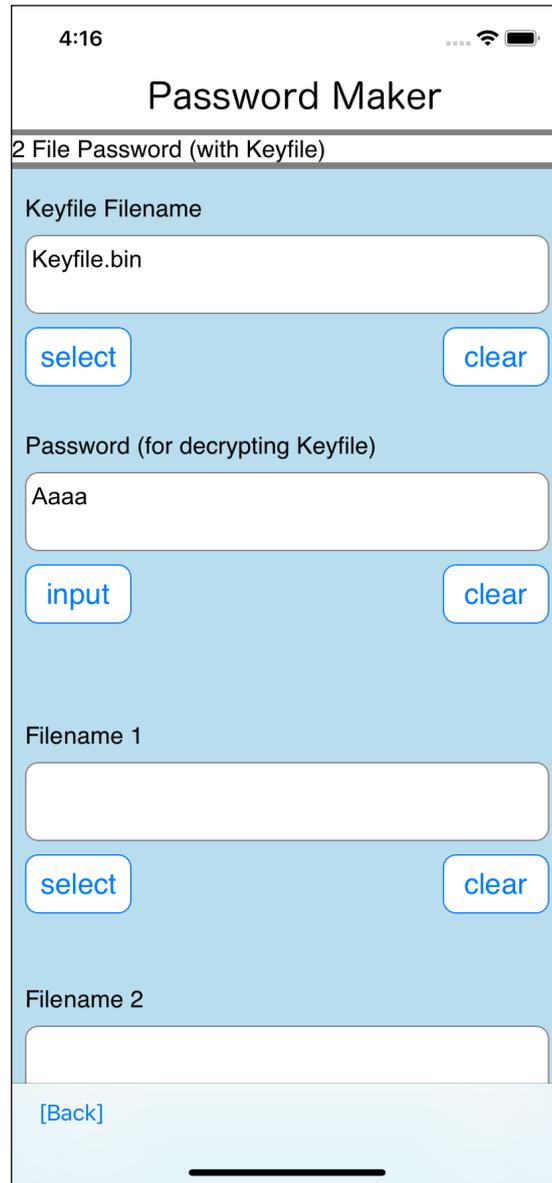

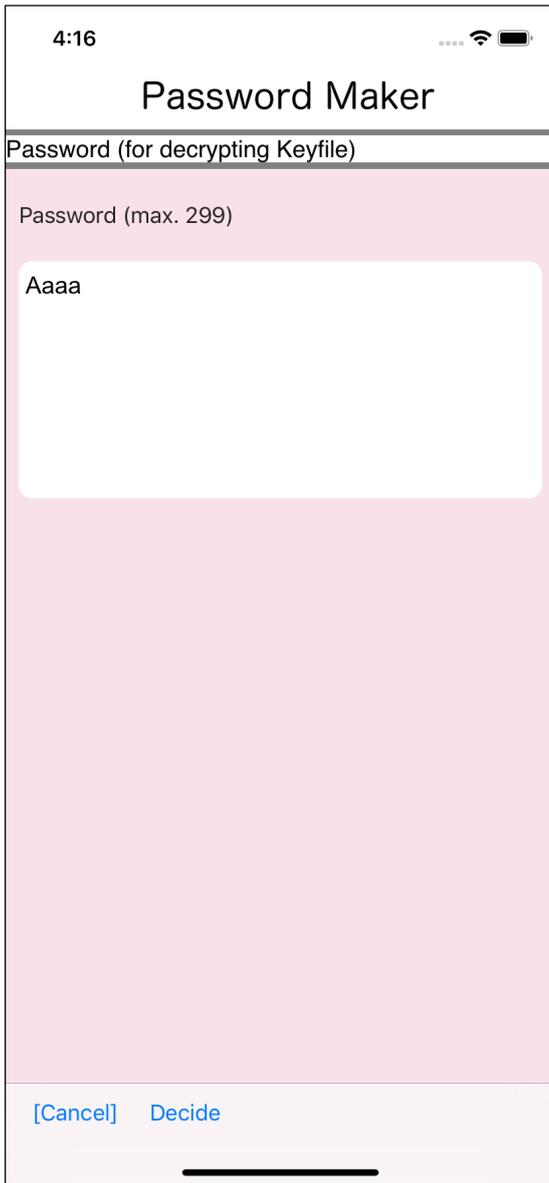

Generated password

This is the meaning.

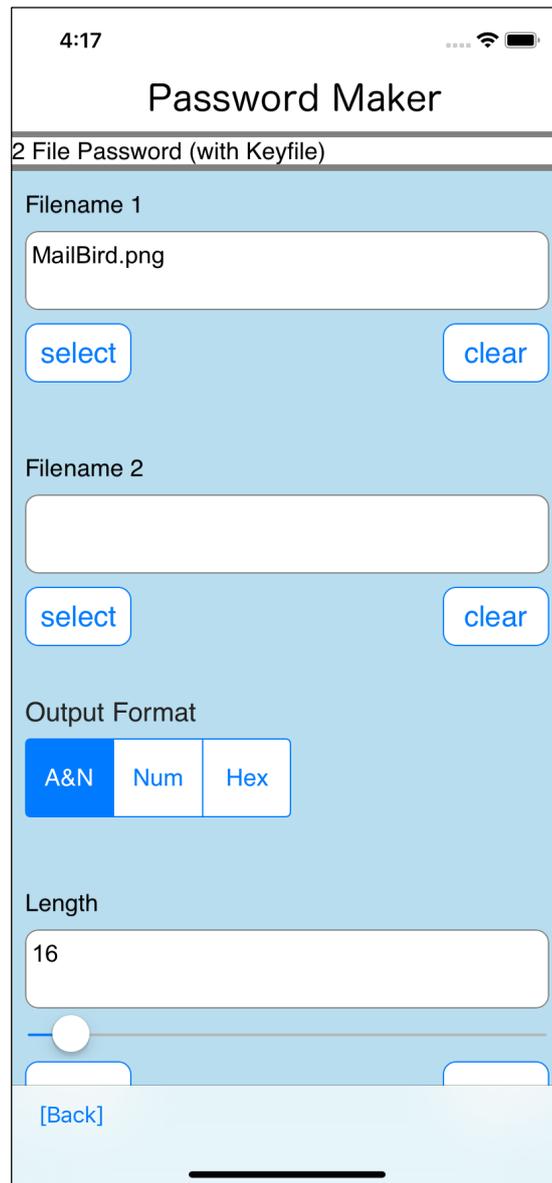

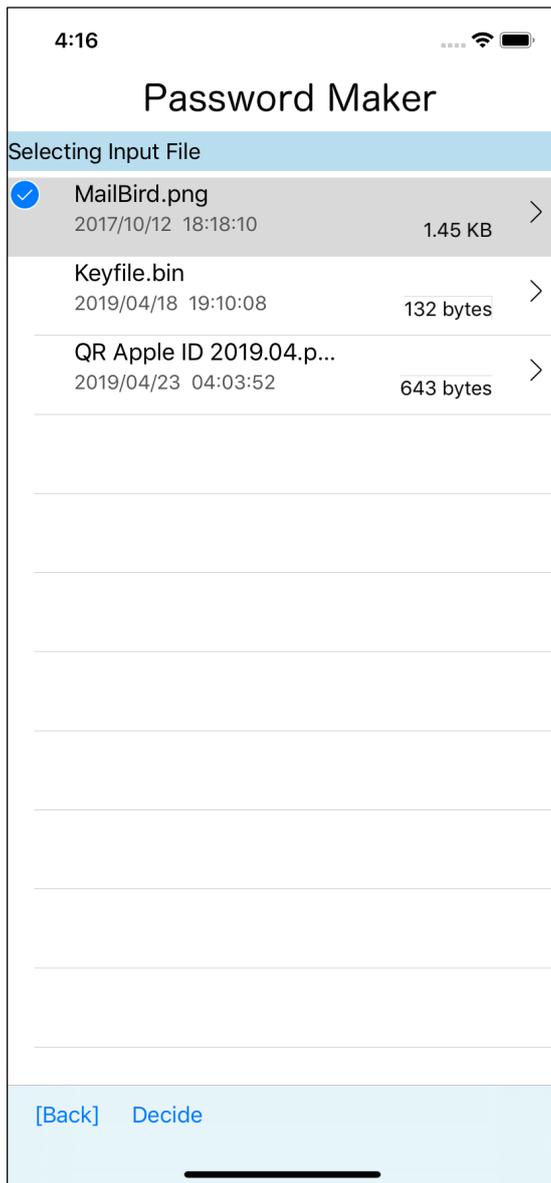

You can get a text view like this by pressing the lower left “select” button of the text view with the file name.

Select a file and press the “Decide” button on the toolbar to return.

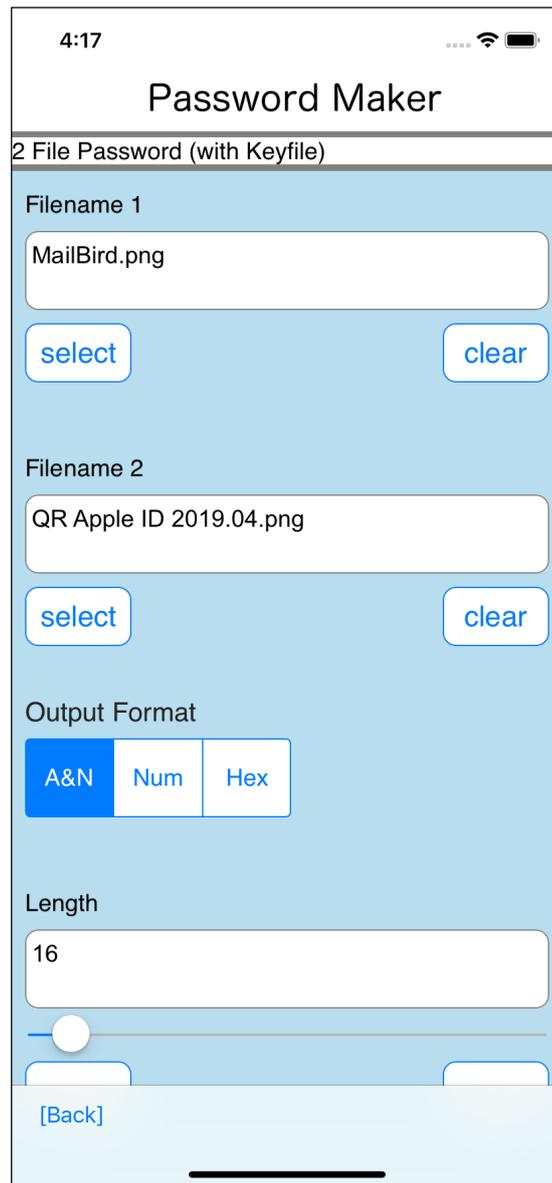

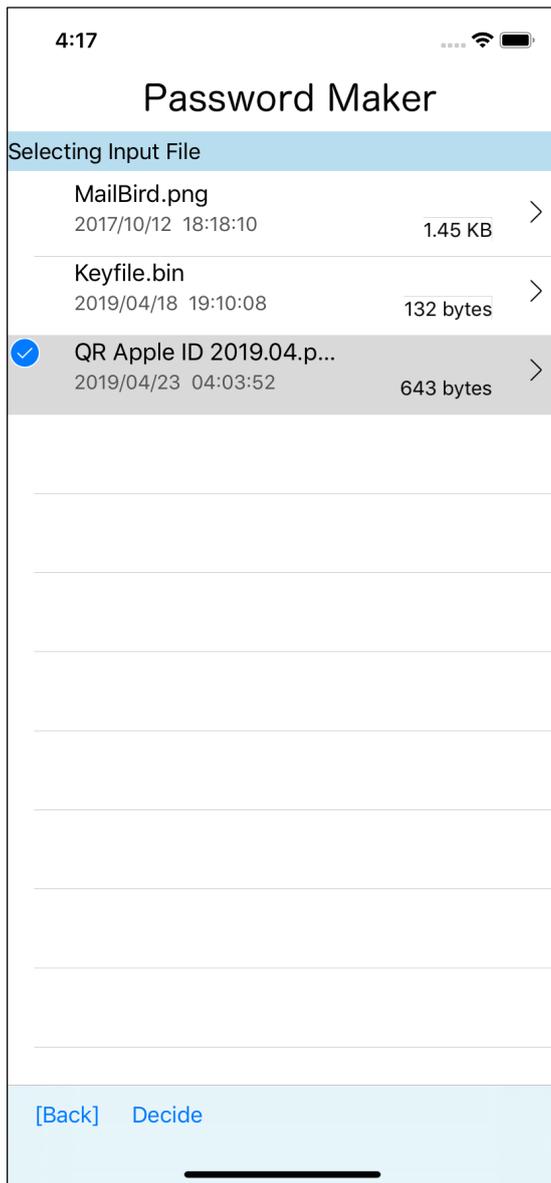

When you press the “input” button under the password text view of the key file, a view for password entry appears as shown at left.

Enter the password used to decrypt the key file and press the "Decide" button on the toolbar to return.

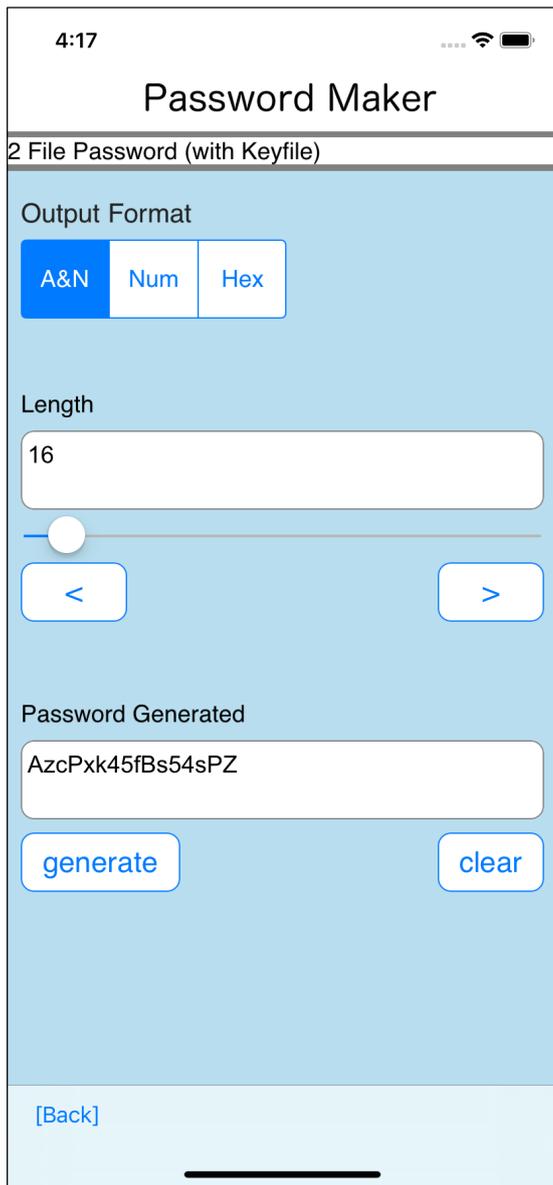

You can get a text view like this by pressing the lower left “select” button of the text view with the file name.

Select a file and press the “Decide” button on the toolbar to return as shown below.

You can get a text view like this by pressing the lower left “select” button of the text view with the file name.

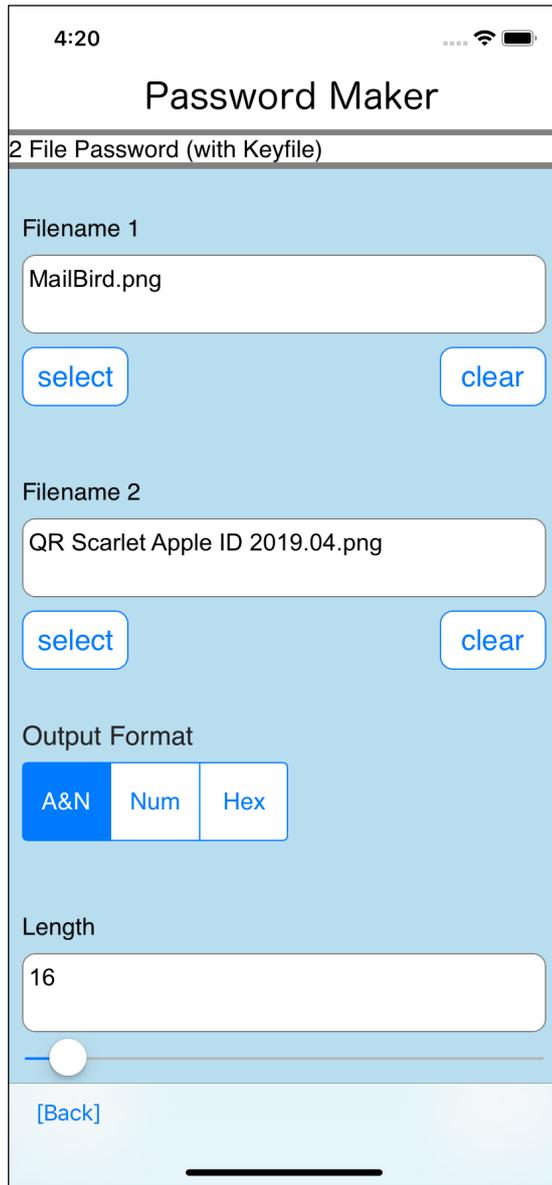

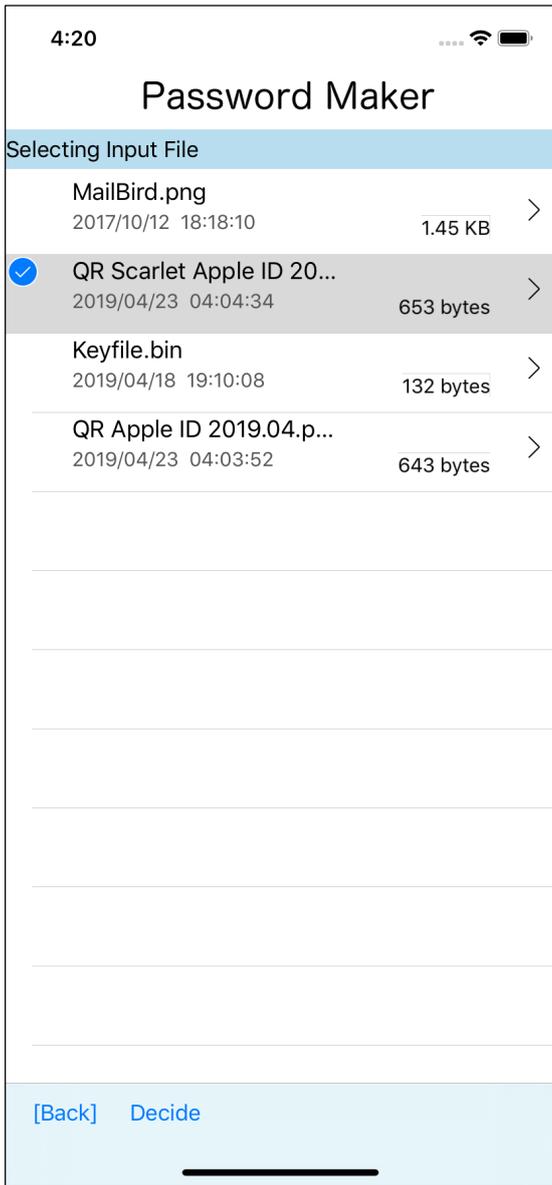

Select a file and press the “Decide” button on the toolbar to return as shown below.

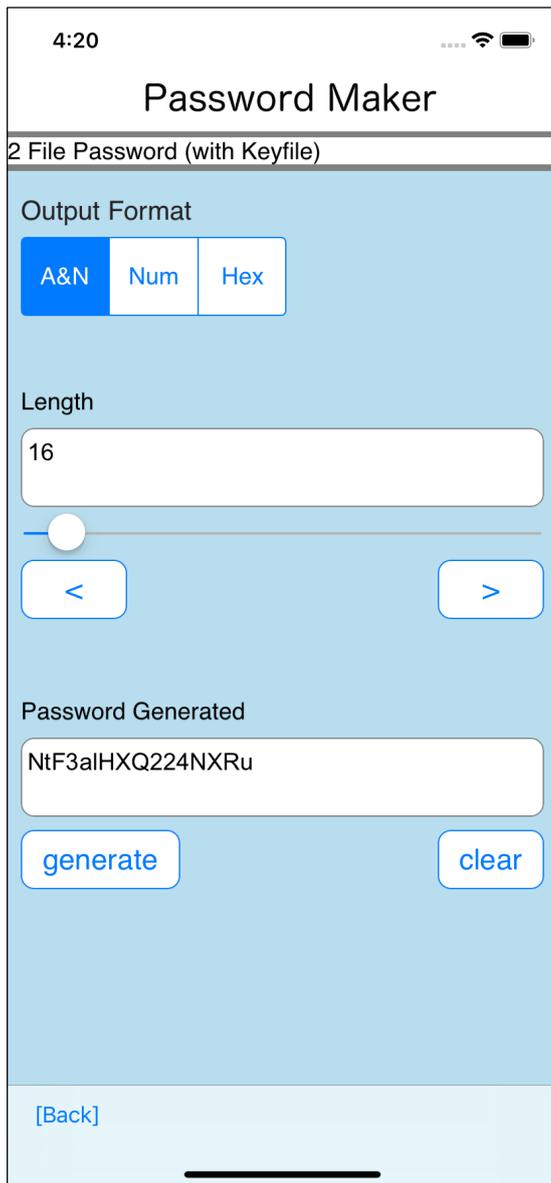

The password will be displayed when you press the “generate” button.

Let's replace the second file with this one.

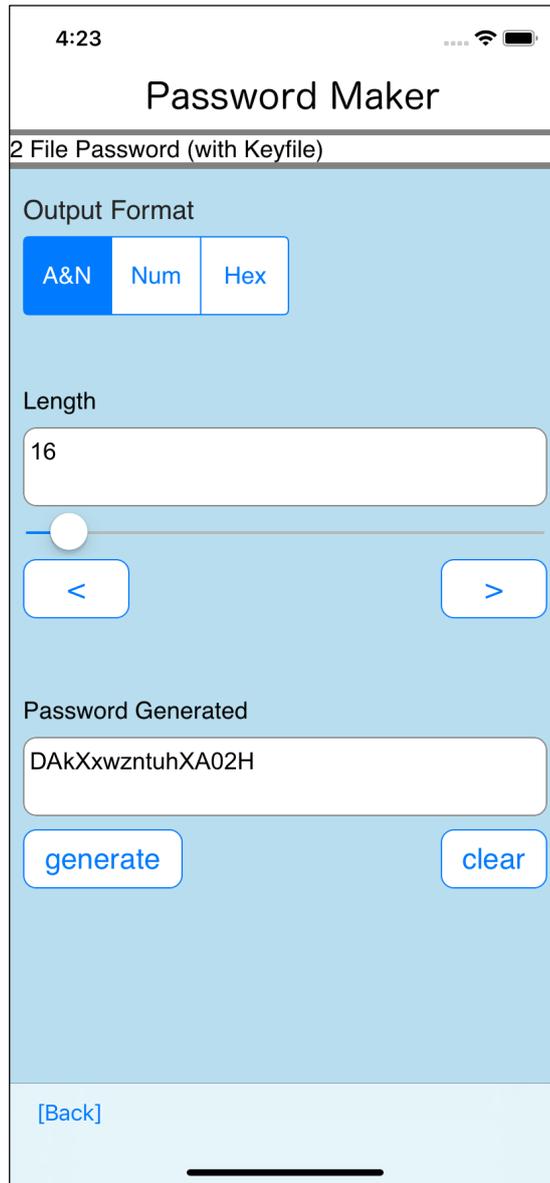

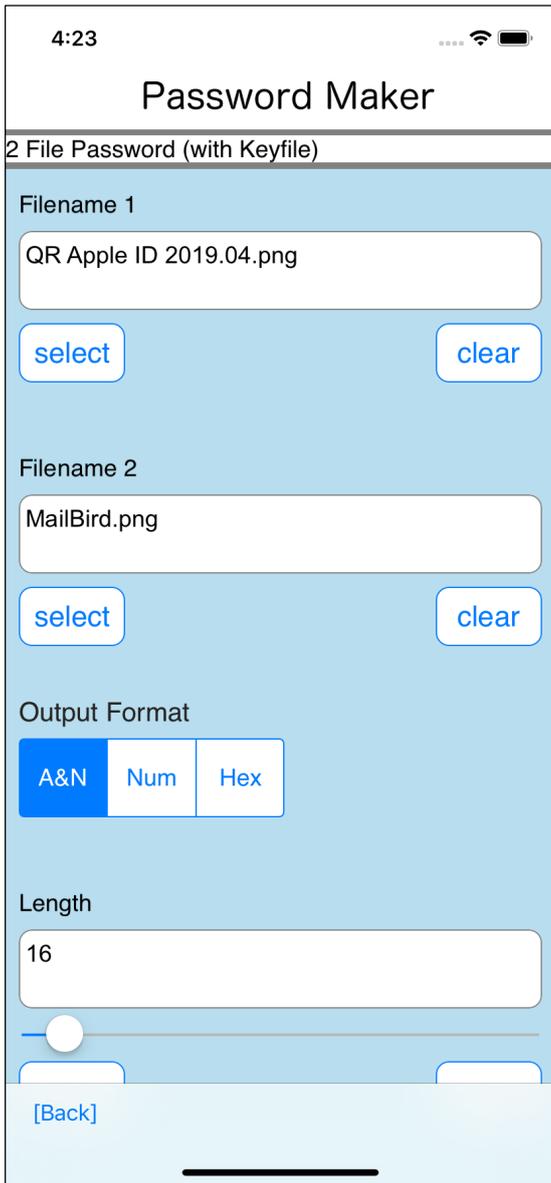

First File MariBird.png

Secong File QR Scarlet Apple ID 2019.04.png

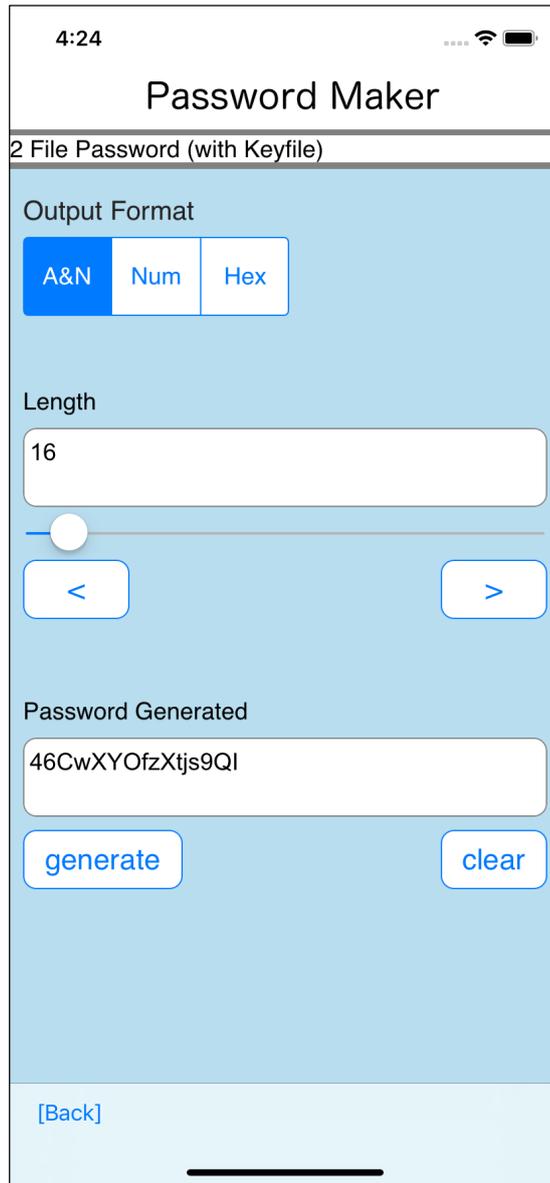

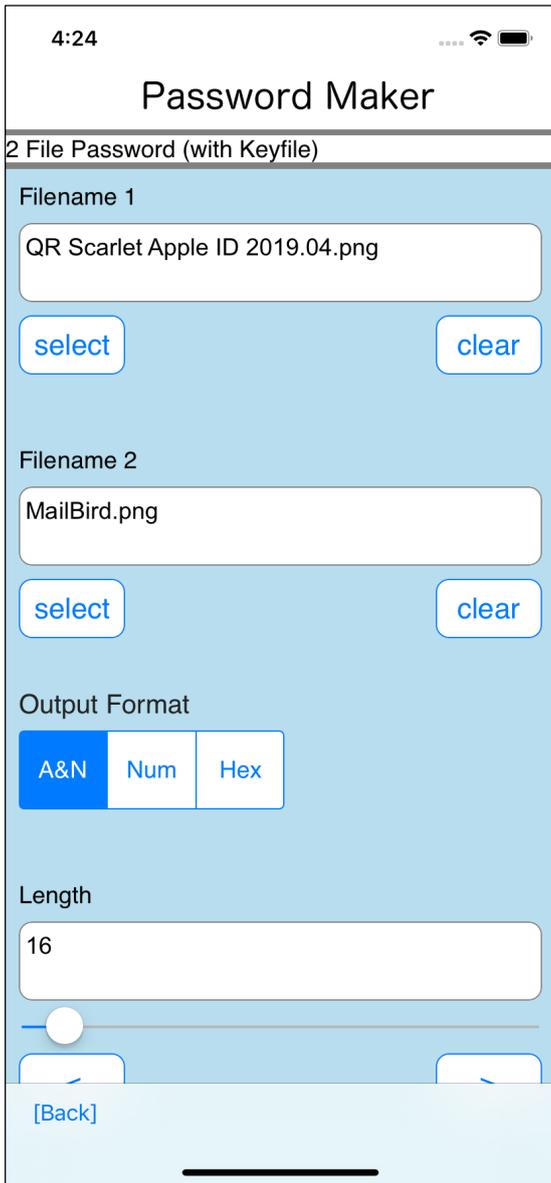

from these two files, the password

NtF3alHXQ224NXRu

is generated.

If you change the order, it will be this password.

This is also the same, and if the file specification order changes, it will be a different password.
