

## Introduction - About the absence of files

QR Ware creates and decodes QR codes for files.

If there are no files in QR Ware's file storage location, many commands will only result in such a message.

Create text file with text input command.

Use the image import command to file the image.

Transfer files from other applications to QR Ware.

If you do such a thing, so that

“There is one file in the file storage location at least.”

it will work normally.

If you forget it, you may only think that the software is malfunctioning.
