

## (BinaryKey) decryption

This command performs decryption using a raw encryption key (decryption key).

The main (Binary-Key) "Decrypt" button will bring up the view below.

The screenshot shows a mobile application interface titled "[Binary-Key] Decryption". At the top, the status bar displays the time "2:58" and icons for signal strength, Wi-Fi, and battery. The interface is divided into three main input sections, each with a label, a text input field, and two buttons: "select" or "input" and "clear".

- Input Filename (cipher text. file to be decrypted.):** A text input field with "select" and "clear" buttons.
- BinaryKey (for decrypting cipher text):** A text input field with "input" and "clear" buttons.
- Output Filename (plain text. file to be outputted):** A text input field with "input" and "clear" buttons.

Below these sections is a large "Do Decrypto" button. At the bottom left, there is a "[Back]" link. The interface has a light blue background and rounded corners.

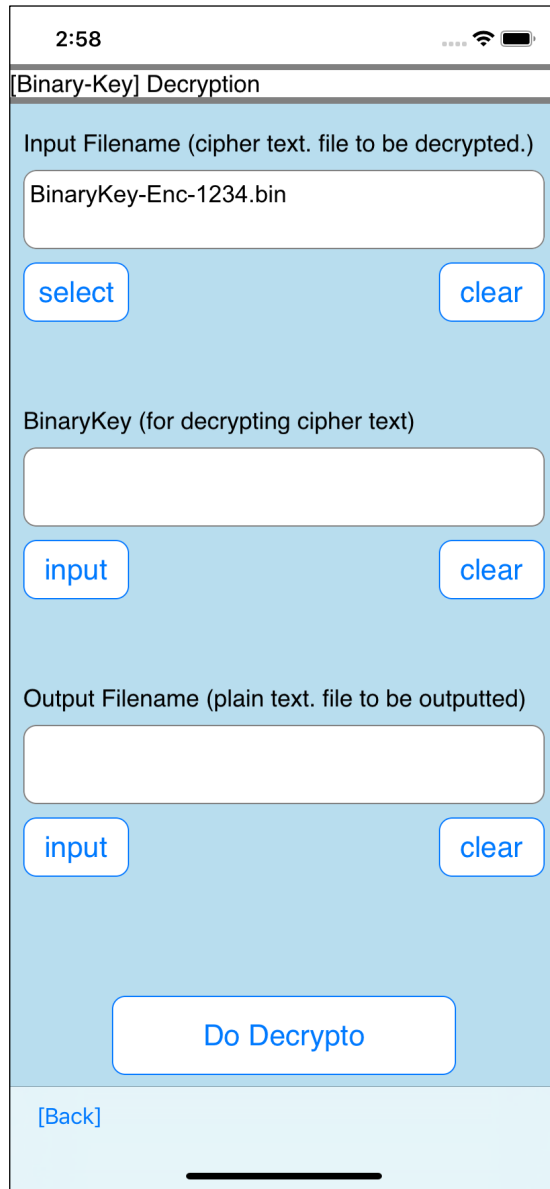

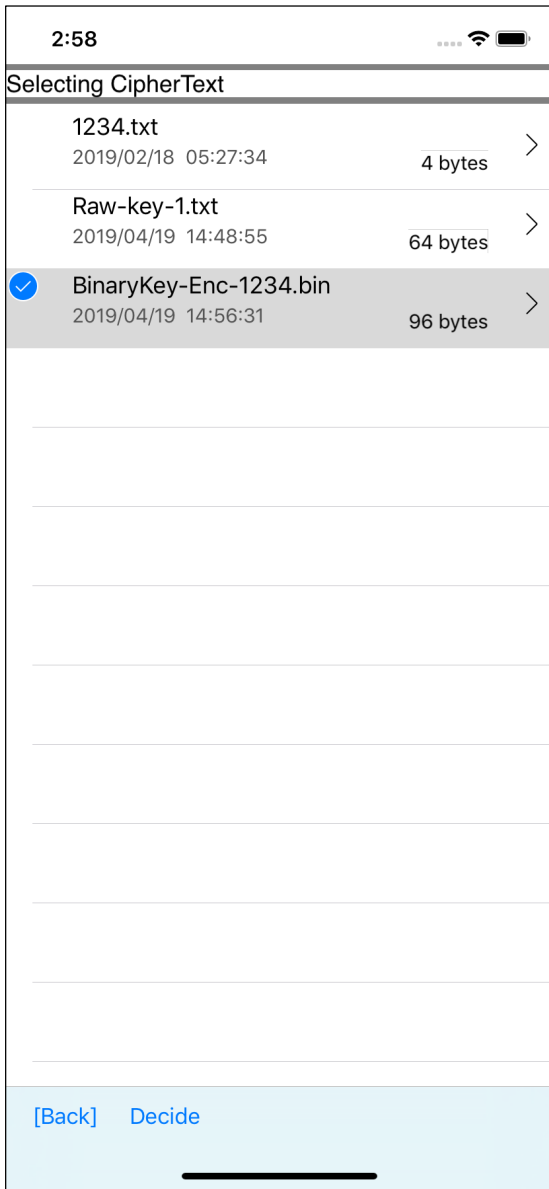

The user interface looks like this.

Decryption target file name

Decryption key

Decryption result output file name

This is the meaning.

When you press the “select” button under the text view of the file name to be decrypted, the table view shown on the left appears.

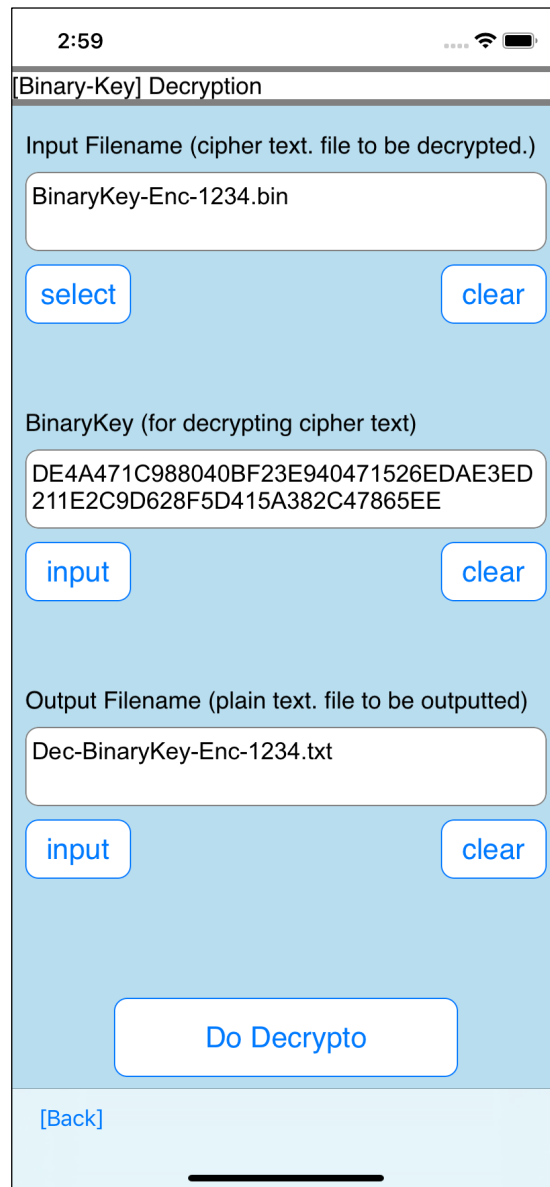

Select a file and press the “Decide” button on the toolbar to return.

Press the “input” button under the text view of the decryption key, and the decryption key view shown on the left appears.

Enter the password and press the “Decide” button on the toolbar to return.

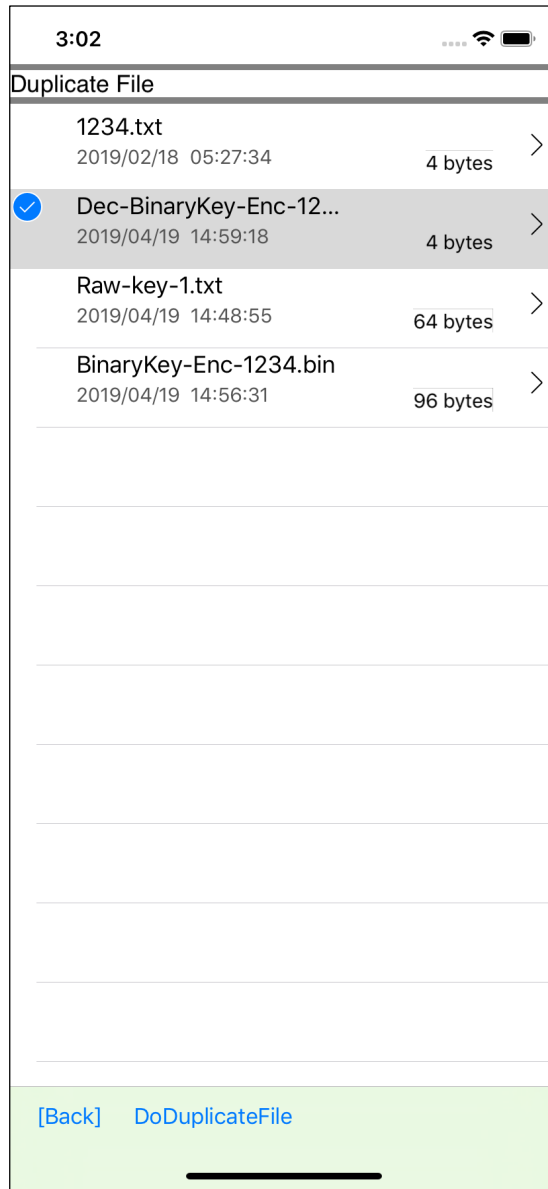

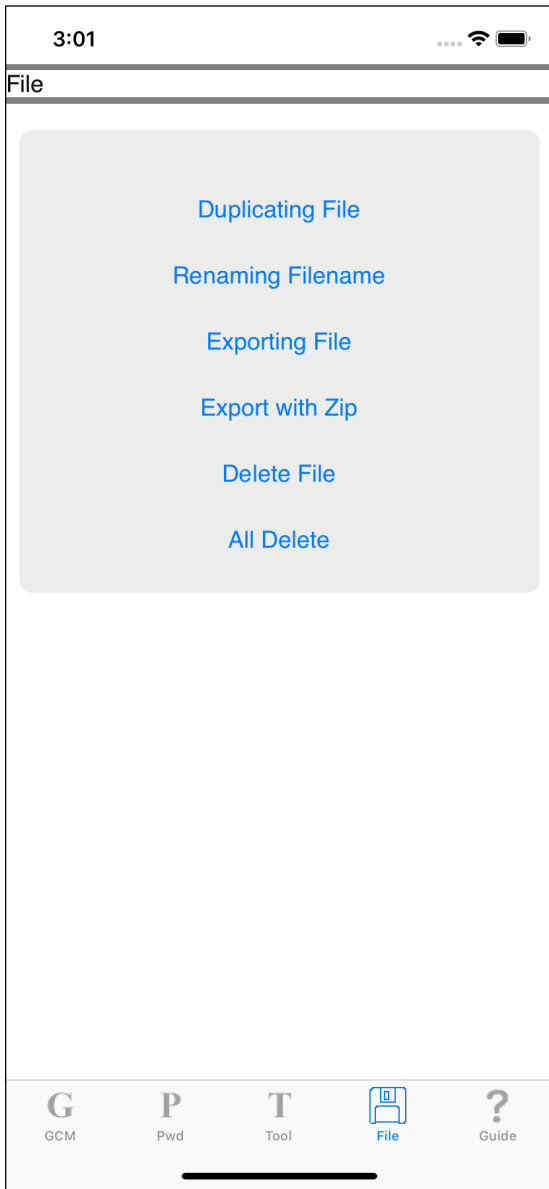

In fact, you should copy and paste in some way.

When you press the "input" button under the text view of the output file name, a file name input view like the one on the left appears.

Enter the file name and press the "Decide" button on the toolbar to return.

After this, press the "Do Decrypto" button to execute decryption.

Use the “Duplicating File” command in order to see the result of the decryption.

It has been restored.
