

# Paste from Pasteboard

This command gets the image attached to the pasteboard.

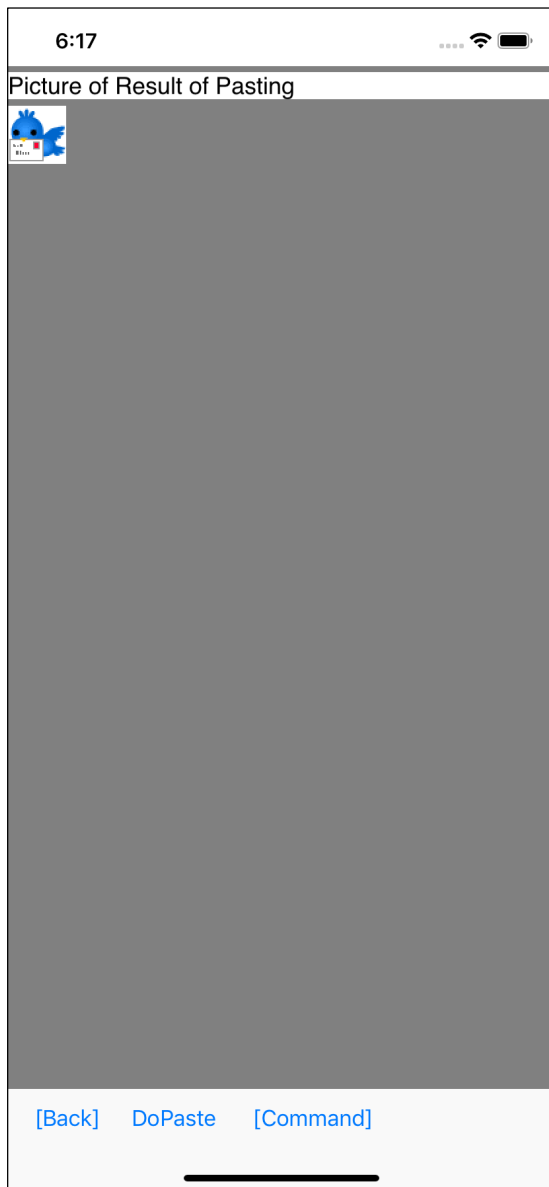

Press the main "Paste from Pasteboard" button and you will see the image view below.

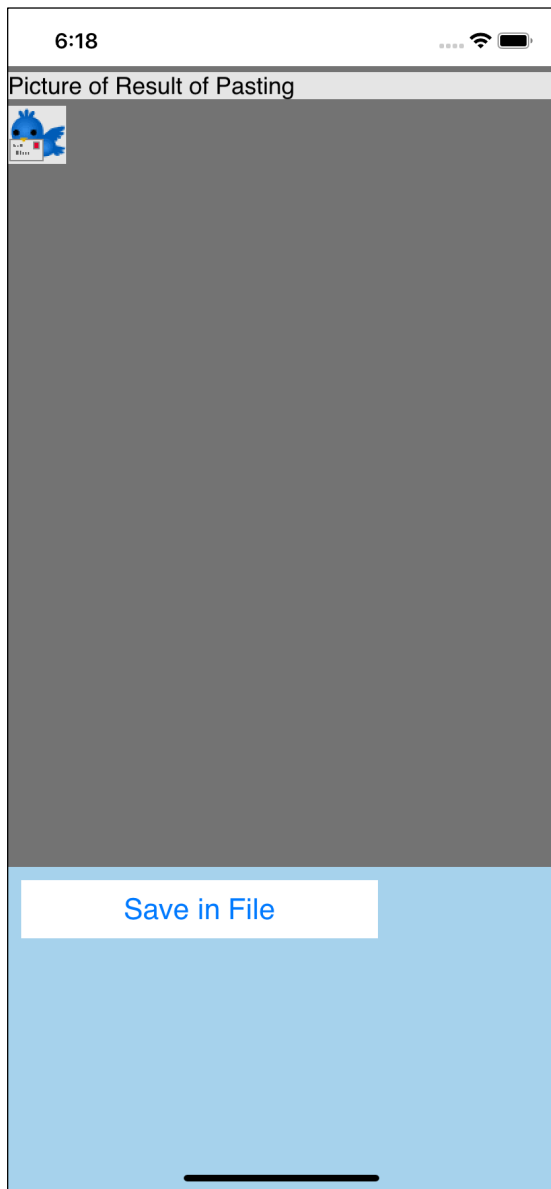

At first, the image to be displayed is not loaded, so it looks like a blank page like this.

When the "DoPaste" button on the toolbar is pressed, the pasteboard image is pasted to this view.

It becomes like this.

When you press the “[Command]” button on the toolbar, a pop-up menu will appear at the bottom of the view, as shown below.

When you press the "Save in File" button, a view for file name input will appear.  
Enter a file name and press the "DoSaveIntoFile" button to file and save the image.
