

(PasswordKey) Browsing Decryption

This decryption command does not output the decryption result to a file, but displays it in text view.

The main (Password-Key) "Browsing-Decryption" button will bring up the view below.

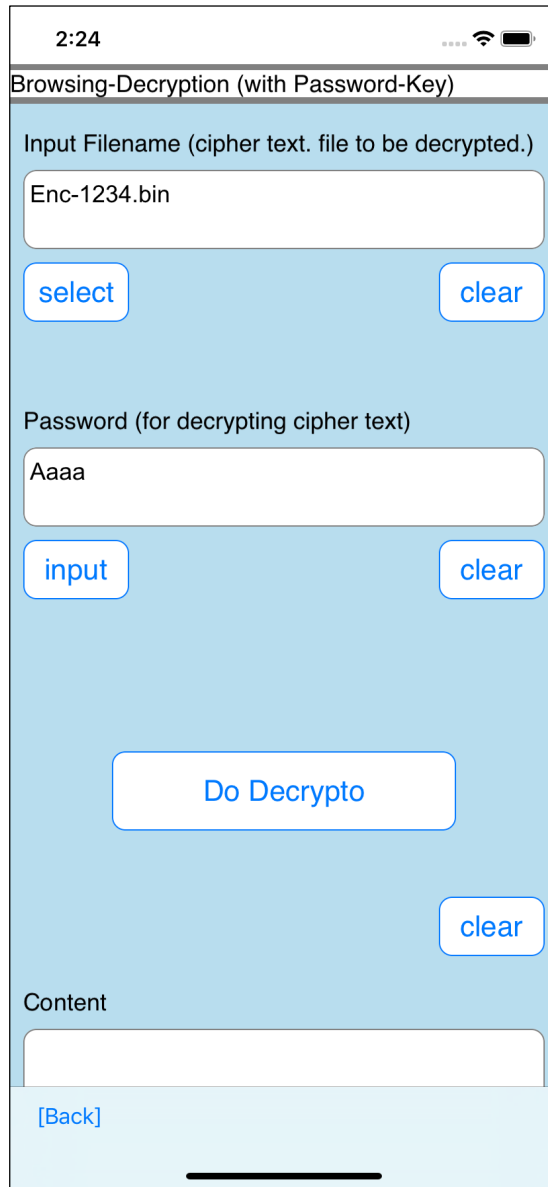

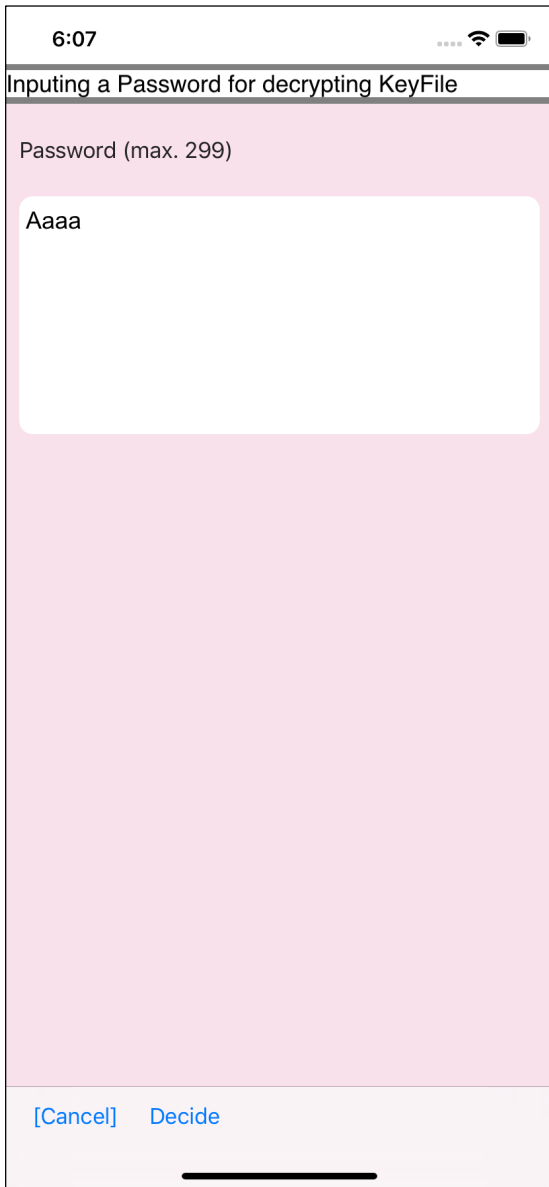

The user interface looks like this.

File name to be decrypted

Decryption password

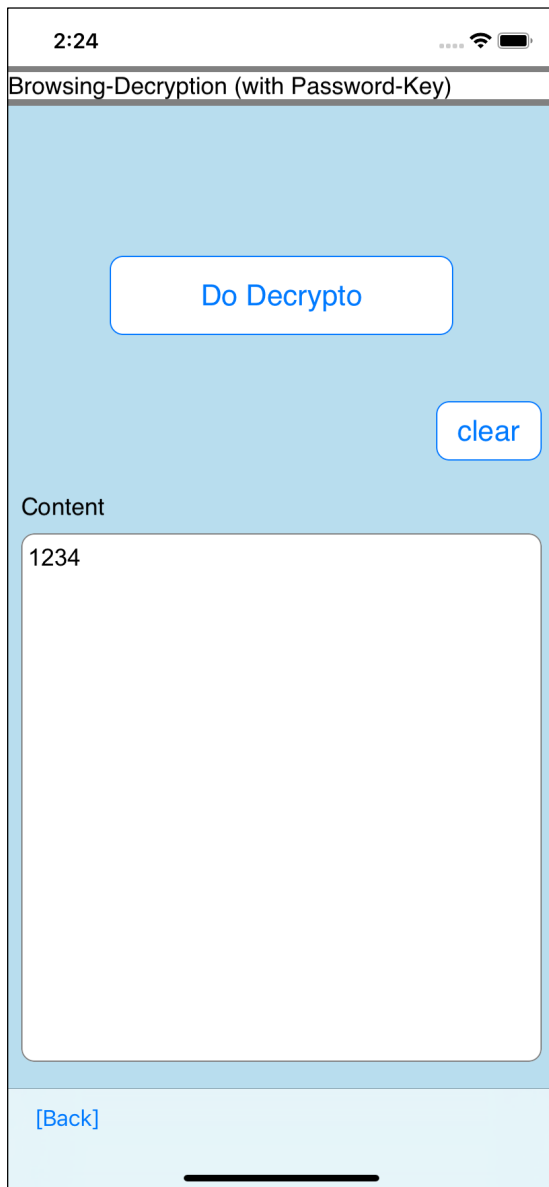

Decryption result display text view

This is the meaning.

Press the “input” button below the password to bring up the password input view as shown on the left.

Enter the password and press the “Decide” button on the toolbar to return.

In this state, if you press the “Do Decrypto” button, the decryption result will be displayed in the text view.
