

Display of content of public key

This command displays the value of the public key content.

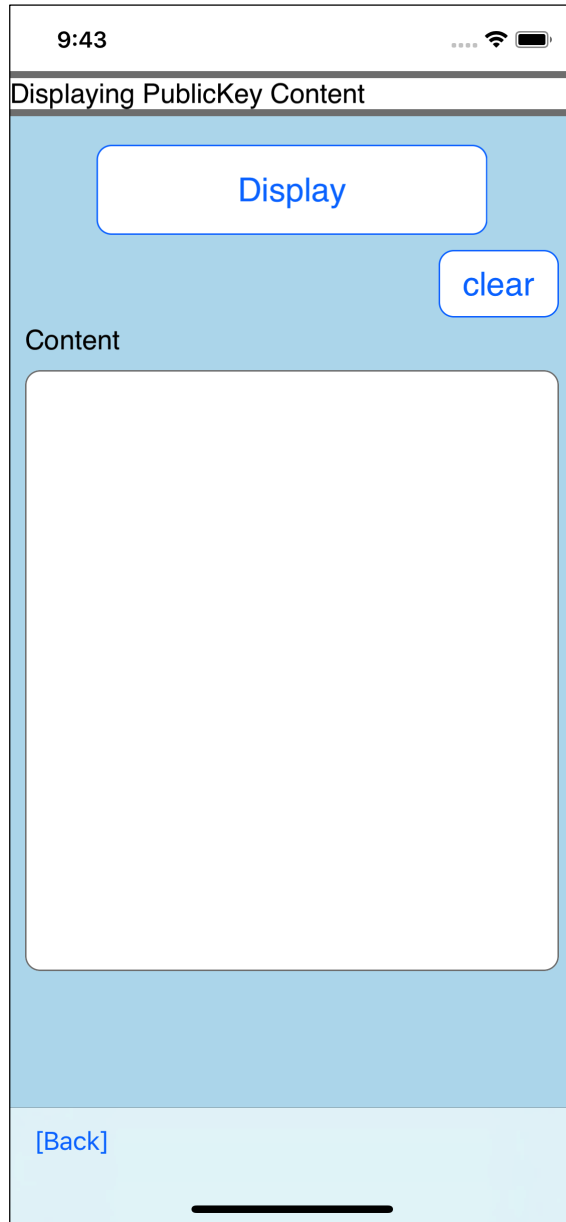

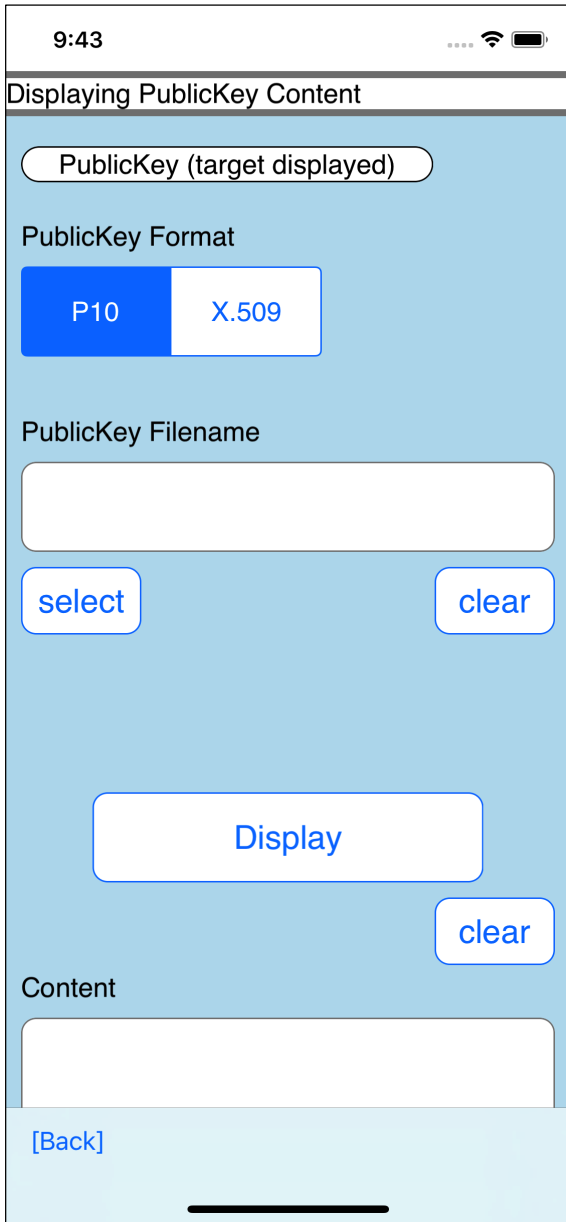

```
PKCS#1 RSAPublicKey
```

```
RSAPublicKey ::= SEQUENCE {  
    modulus          INTEGER, -- n  
    publicExponent  INTEGER -- e  
}
```

It is this actual value that is displayed.

The public key stored in the X.509 public key certificate is also in this format for RSA public key cipher.

This form of public key is extracted from the X.509 public key certificate and displayed.

The user interface looks like this.

Public key type

Public key file name

Text view for content display

This is the meaning.
