

## Convert PEM file into binary file

This command converts a PEM file into a binary file.

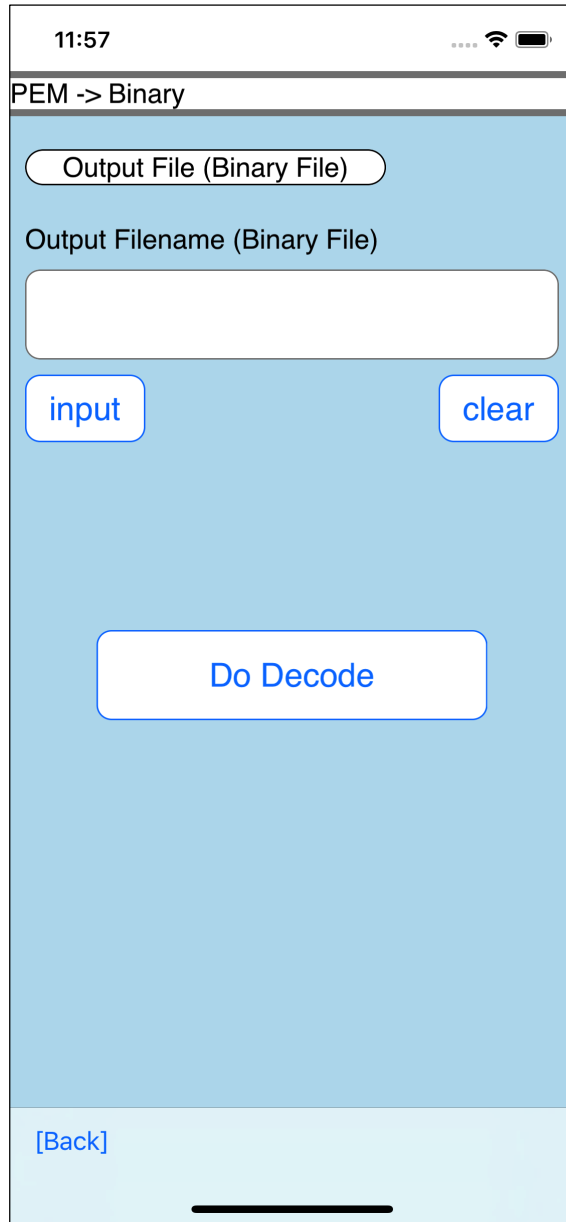

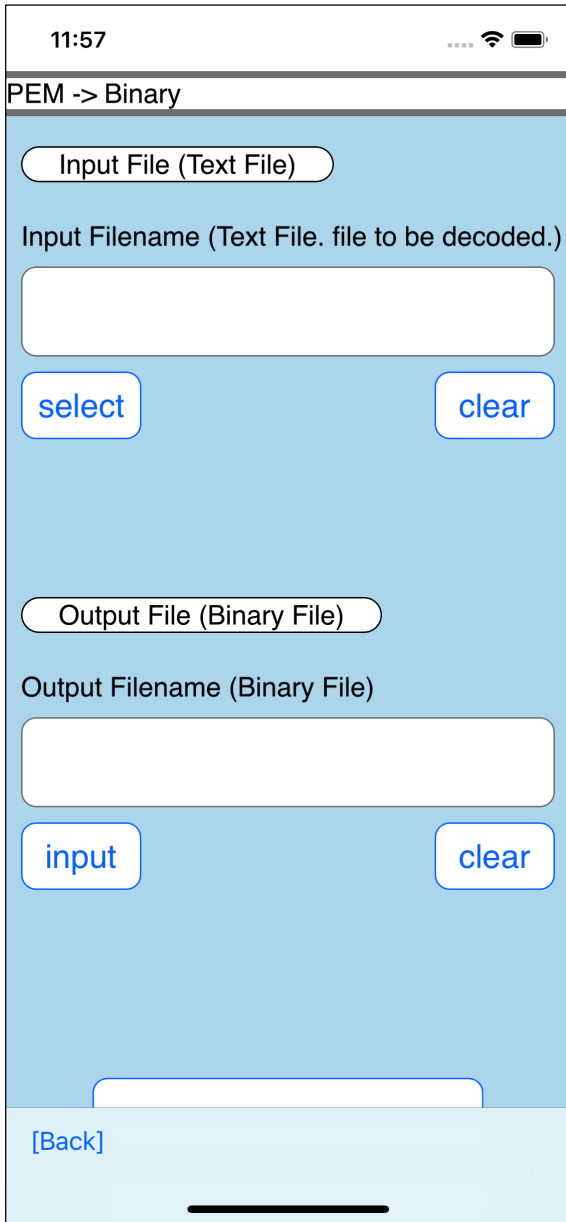

Remove the boundary string.

Base 64 Decrypt.

All this command is doing is just these two.

However, boundary strings are checked to see if they are paired.

If the boundary string is not a pair, it will not be accepted.

The user interface looks like this.

PEM file name to convert

Output destination file name

This is the meaning.

11:57

PEM -> Binary

Input File (Text File)

Input Filename (Text File. file to be decoded.)

PEM-AliceRSASignByCarl-cer.pem

select clear

Output File (Binary File)

Output Filename (Binary File)

input clear
